CPU utilization monitoring software can help you see CPU usage in real time. This software can run on a computer with only 512MB RAM and 32MB memory available. The best part is that you do not need to install any software before the CPU monitoring, as it does not get in your way during its usage. In addition to that, it is also supported by many different operating systems, such as Windows, Linux, BSD, OSX and even Solaris. The software comes with many different settings, so that you can easily customize it based on your needs and preferences. You can take a look at the comparison table above to know more about this utility. **How to Monitor Processor Utilization** To monitor CPU utilization, there are various ways in which it can be done. Of course, you can use Task Manager to check the utilization percentage of one or more cores. However, you should keep in mind that it does not present the total utilization of a single core. You can also do so by opening the Task Scheduler and checking the CPU Monitor button. In addition to that, you can use a third-party utility, such as Resource Monitor. It is a software program which allows you to monitor most of the memory and CPU of your system in real time. Most importantly, it is very user-friendly, since it does not require certain technical knowledge to access its settings and features. **CPU PerfMon Overview:** CPU PerfMon is a software application which offers a simple user interface to make it easier for you to view CPU utilization of individual cores. There is also a built-in scheduler, which allows you to set up scheduled tasks and keep monitoring your CPU usage in real time. It is a good choice for you if you want a simple utility that gives you a simple interface to monitor the utilization percentage of individual cores. Nevertheless, it does not support a wide variety of features, including logging and customization. **Resource Monitor Overview:** While Resource Monitor is a common software program that allows you to monitor system resources on your computer, it differs from other utilities of the same name. The reason is that it combines performance-monitoring functions with advanced scheduling options and a user-friendly interface. More than that, it uses real-time measures for checking CPU utilization in a chronological manner. To monitor your system, you can

At the bottom of the file, in the event log section, add the following: [X-CATALOG-NAME] = LogFusion Now start the application LogFusion. Select File->New. Select the event log tab. Use the Columns link to add EventID, LogFile, Date/Time, Category, Message, and Host Name. Now you can use the LogFusion GUI to start, stop, pause, resume or even use a log subscription to filter on the message you have listed at the bottom. **The Enterprise Event Viewer (Scheduled View)** If you want more options, including filtering the entire system by service or process, you can use the Enterprise Event Viewer. It is located at C:\Windows\system32\winevt\Logs. For example, the Enterprise Event Viewer was installed under "C:\Program Files (x86)\LogFusion\LogFusion\Bin". Create a text file, name it 'EventLogs', and open in Notepad. At the bottom of the text file, in the event log section, add the following: [X-CATALOG-NAME] = LogFusion Now start the application LogFusion. Select File->New. Select the Event log tab. Use the Columns link to add EventID, Source, EventCode, Message, Start Time, Time Stamp, Machine Name, User Name, and Computer Name. You can filter on the specific column you want, and even setup rule-based exclusions to remove particular types of entries. This gives you the possibility of archiving just some types of logs, or only be notified when certain types of errors are detected. **The Log-Viewer** Another option is the Log-Viewer, which has the advantage of
