A: NOTE: Below are the notes that I made while solving this issue. I might have missed some points but this might help

---

someone. The path you provide is only a pointer, not a complete path and as such it will point to some random place in the disk and the OS probably won't be able to find that random directory, unless you add it to your environment variables. (And even if it was available in the environment, do you know what are the sizes of the random directories that are on your PC? they can't all be the size of the size of your working directory plus some other garbage!) Also, you try to load a file with the full path as a filename, which also won't work:

```
char *str = "FF_MAY.pdf"; // WON'T WORK
char *str = "..\\..\\ff_may.pdf"; // WON'T WORK
char *str = "C:\\Users\\ShitBox\\Desktop\\FF_MAY.pdf"; // WON'T WORK
```

You need to use a file descriptor (which is an integer), possibly obtained by the function `open`. You must only open the file as read-only, so no writing operations will be affected. As such, you can't use `fread` or `fwrite` functions directly. You need to use their `FILE*` equivalent, which is:

```
FILE* f = fopen("C:\\Users\\ShitBox\\Desktop\\FF_MAY.pdf", "r"); // FILE is just a wrapper for an int
fread(ptr, sizeof(int), 4, f); // Read an int
fclose(f); // Close the file descriptor
```

The variable `ptr` contains the integer value that you read from file. You probably have to follow all of the above in a loop. Something like this:

```
FILE* f = fopen("C:\\Users\\ShitBox\\Desktop\\FF_MAY.pdf", "r"); // FILE is just a wrapper for an int
int value; fread(&value, sizeof(int), 1, f); // Read an int
fclose(f); // Close the file descriptor
int v1 = value; // value contains the integer value from the file
```

```
fopen("C:\\Users\\ShitBox\\Desktop\\FF_MAY.pdf", "w"); // Open a new file for writing
printf("Value of d0c515b9f4
```

Reset Epson T60 T50 P50 T30 1390 0972984582.69 Before resetting your device, you will need to backup any personal information such as contact information, photos, and files. Please follow the steps outlined below to begin the backup process. 1. In Settings, tap to open the Settings app. 2. Tap, to open the Apps & Notifications drawer. 3. Tap Backup & Reset. 4. Your device should display the following message: Backup Now. 5. Tap Backup Now at the bottom of the message. If the message says All Apps & Data will be backed up, tapping Backup Now only backs up selected apps and data. 6. If backup already completed, your device will ask if you want to cancel the backup. Tap Reset to complete the process. 7. When you restart your device, backup should begin. Note: You won't be able to use your device if there's a backup already in progress. Reset Epson T60 T50 P50 T30 1390 0972984582.69 Restore your device and set up your apps and other content the way you want them. To do this, you must know your device's product number. To locate your product number, open Settings, and tap About. By default, your device only displays the production code. To view the product number, tap Device Model to open the product number summary. The product number is located here: This page help you to reset epson t60 t50 p50 t30 1390 0972984582.69 While your device is
